Here is my pilot website: https://srhmajors.github.io/ISLT_7360/PilotSite/Majors_Pilot.html

This class started off so hard and I finally feel like I am understanding what I am doing. My website is nothing fancy but I am proud to say it passes all validation processes! Please give me some feedback for changes that you think are needed!

Please let me know if you have any questions or want more detail on any of my feedback.I used the rubric for the Pilot Site to guide my comments.

Navigation: Navigation is consistent from page to page and is easily accessible. Navigation bars are included at the top and bottom of each page. Links function properly. Users know which page they are on based on the smaller title bar under the navigation links.

Organization: At least 3 of the 5 required pages are included in the pilot site (You've finished all 5 pages). I appreciate the navigation bar at the bottom of the page as well. One of my pet peeves is having to scroll forever to get back to the navigation links.

Spelling/Grammar: I found no spelling or grammatical errors.

Required Elements: Your structural code seems to be done correctly and your title is in line with the requirements.

Color Scheme: The banner image is busy making it difficult to discriminate the text for people with certain visual impairments (I'm more aware of this because of my son's visual issues.) You might try adding a whit shadow to the text to provide some depth or seeing if you could weight it differently somehow. I like the colors you chose and they are consistent across the entire website. The colors of the navigation bar, text etc. are easy to read and in a color scheme that is easy to look at for long periods of time. I like that the hyperlink colors are changed to match your color scheme.

Use of Media: Copyrights for media included at bottom of each page. You have your table on the "Homework" page. 5 images are included. On the resources page, #3, the word from is super close to the image. Not a huge deal by any means but something you might look at.

Contact Info and Date Last Updated: Email and contact links work. Last updated date appears to be correct.

Links: Your links open in the same window, might be a helpful change for the convenience of your users to have them open in a new window. Do we need both W3C CSS links? I thought we chose the one we liked best rather than including both.

Pages: Pages all seem to be finished already and provide information helpful for the intended user.

Code: I didn't notice any problems or missing parts in the code though your CSS shows up differently than mine does....maybe because I did mine inline on my pilot site instead of using a stylesheet???

Great work! Your site is set up to provide good information for students trying to succeed in your class or even parents trying to point their kids in the right direction. It is concise and to the point which I love. It has only the most important information which makes it easy for the user to locate the desired information. Well done!
